Cardio-Vascular Imaging
(UK) LTD

Est. 2014

Take on cardiac studies without building a cardiac service.

CVI brings study-specific cardiac investigations to your site — for GP practices, primary care research sites and clinical research teams.

RESEARCH & SITE DIAGNOSTIC ENQUIRIES

www.cviuk.com

A flexible cardiac diagnostics service, brought to your site.

CVI is an external cardiac diagnostics provider. We support GP practices, primary care research sites and clinical research teams with study-specific cardiac investigations — so sites can deliver studies that require cardiovascular measurement without establishing their own specialist cardiac service.

WHO WE SUPPORT

- GP practices and Primary Care Networks (PCNs)
- Primary care research sites
- Clinical research facilities, teams and sponsors

WHAT WE BRING TO YOUR SITE

- Study-specific cardiac investigations
- Delivery at participating research sites
- Cardiac screening for volunteers
- Emergency echo support
- Reporting, QA and research documentation

SUPPORTING CAPABILITY

Cardiac diagnostics, where the protocol calls for it.

A complete non-invasive repertoire, delivered at your site and reported by an accredited Cardiac Physiologist, in accordance with the study protocol.

Echocardiography (TTE)

Full dataset studies with written reports; strain and advanced measures where required.

12-Lead ECG

Resting ECG, standalone or within the imaging pathway.

Ambulatory ECG (Holter)

Cable-free patch monitoring, 24 hours to 28 days, fully reported.

Ambulatory BP (ABPM)

24-hour blood pressure profiling with trends and summaries.

Accredited operator coordinated end to end.

Engagement is deliberately simple. We agree scope, protocol requirements and governance up front, then bring the service to your site with a single point of contact throughout.

01

Feasibility & Coordination

Review of protocol requirements, site fit and scheduling — with a single point of contact.

02

Set-up & Governance

Quality, reporting standards and escalation pathways agreed before any session begins.

03

On-Site Delivery & Support

We bring the equipment and expertise to your site — regular clinics or individual sessions, with responsive scheduling.

04

Data & Reporting

Consistent, study-ready reports, secure data return and research documentation, aligned to your data plan.

WHAT SITES CAN RELY ON

Feasibility & site coordination

Clear answers on what can be delivered, when and how — before you commit.

On-site delivery & support

We bring echo, ECG, Holter and ABPM to your site, with responsive scheduling to protect recruitment timelines.

Compliance-conscious operations

Governance, quality assurance and escalation aligned to Good Clinical Practice principles.

Precision, restraint, and a single point of contact.

Consistency

An accredited Cardiac Physiologist across every visit means reproducible acquisition and reporting.

Configured to protocol

Investigations shaped around your study — not a fixed, one-size package.

Flexible on-site delivery

We bring echo, ECG, Holter and ABPM to your site — no need to build an in-house cardiac service.

Compliance-conscious

Governance and quality assurance agreed and documented before commencement.

"We describe only what we deliver. Scope, standards and reporting are agreed in writing at the outset, so expectations are clear on both sides from the start."

LED BY

Services are led by an experienced Cardiac Physiologist with British Society of Echocardiography (BSE) and European Association of Cardiovascular Imaging (EACVI) accreditation, and AHCS professional registration.

START A CONVERSATION

Discuss your study.

Tell us about your study and site — we typically respond within one working day.
